

Business Process Re-engineering

Simplify how work gets done.

ITG helps organizations redesign complex workflows into clear, connected processes. We identify bottlenecks, remove unnecessary handoffs and define responsibilities and controls so your teams can work with greater clarity.

Solutions we provide

Process discovery and mapping

Understand how work moves across teams and systems. Map current workflows, dependencies and exceptions to reveal delays, duplication and gaps in ownership.

Workflow redesign

Create simpler workflows for activities such as approvals, procurement, onboarding and service requests. Define the steps, decision points and escalation paths needed to keep work moving.

Automation readiness

Identify repeatable tasks suitable for automation and clarify the rules behind them. Define requirements for digital forms, routing and notifications before implementation.

Roles, controls and accountability

Establish clear process owners, responsibilities and approval boundaries. Build review points and exception handling into the redesigned workflow.

Performance measurement

Define practical measures for cycle time, backlog, rework and service quality. Give teams a consistent way to assess whether the redesigned process is improving operations.

Adoption and operational handover

Support the transition with process documentation, standard operating procedures and team guidance. Help people understand their responsibilities and use the new workflow consistently.

What this helps you achieve

Fewer avoidable handoffs. Clearer ownership. More consistent execution. A stronger foundation for responsible automation.

Ready to simplify a business process?

Tell us where work slows down. We will help define a practical scope for redesign.

E-Commerce & Marketplaces

Connect the sale to the systems behind it.

ITG builds commerce experiences that bring product discovery, purchasing and operations together. We connect storefronts and marketplaces with product, payment, order and fulfilment workflows to support a coherent customer journey.

Solutions we provide

Digital storefronts

Create responsive storefronts with product browsing, search, product detail pages and account journeys. Shape the experience around your catalog and the needs of your customers.

Catalog and product information

Organize product descriptions, images, variants and pricing for consistent presentation. Connect catalog data to the business systems and sales channels that need it.

Cart, checkout and payments

Build clear cart and checkout journeys with payment integrations, delivery options and order confirmations. Handle payment status and unsuccessful transactions within the buying flow.

Marketplace connections

Connect product listings and orders with relevant marketplace channels. Align product information and order data so teams can manage channel activity with greater visibility.

Order, inventory and fulfilment workflows

Connect commerce with inventory, ERP, warehouse or delivery systems as required. Support stock visibility, order routing, shipment updates and returns across the operational journey.

Commerce reporting

Bring sales, order status and channel activity into useful reporting. Help teams understand purchasing patterns and identify friction in the customer and fulfilment experience.

What this helps you achieve

A clearer buying experience. More consistent product information. Better visibility of orders and stock. Less manual reconciliation between channels and operations.

Planning a storefront or marketplace integration?

Share your sales channels and operational systems. We will help shape a connected commerce solution.

Generative Media Production

Turn creative ideas into consistent content.

ITG uses generative workflows to produce visual and written assets for digital channels. We bring creative direction, brand standards and human review into the production process so content stays aligned with its purpose.

Solutions we provide

Creative direction and content planning

Translate campaign objectives into visual concepts, messaging and asset requirements. Define the audience, channel, tone and creative constraints before production begins.

Generative visual assets

Produce concept visuals, illustrations and campaign imagery through guided generation and refinement. Review outputs for brand fit, visual quality and suitability for their intended use.

Written content and messaging

Develop copy variations for websites, product descriptions, campaigns and social channels. Refine generated drafts for clarity, factual accuracy and consistency with your brand voice.

Content variations and channel adaptation

Adapt approved concepts into formats, sizes and message variations for different channels. Maintain a consistent creative direction across the resulting asset set.

Brand, quality and rights review

Build approval checkpoints into the workflow. Review assets against brand guidelines, check usage permissions and flag sensitive or unsuitable outputs before release.

Asset organization and production handoff

Organize approved files, versions and usage notes for your teams. Prepare assets for publishing with clear naming, agreed formats and documented approval status.

What this helps you achieve

Faster iteration on creative concepts. More consistent content across channels. Clearer review and approval. Organized assets ready for production handoff.

Need more content with a consistent creative direction?

Tell us what you need to produce and where it will appear. We will help define the creative scope and review workflow.
